

Pista

AI-powered, white-label online ordering for cafés & restaurant chains

Your café. Your customers. Your app. Zero commission.

Pista gives every café its own branded ordering app — menu, loyalty, analytics and an AI ordering assistant — for a flat monthly fee instead of the 20–30% aggregators charge. Live, multi-tenant, self-hostable.

THE PROBLEM

Cafés are taxed 30% — and don't even own their customers

**16-
30%**

commission on every order — pure margin erosion for thin-margin cafés

0

customer contact, data or relationship — the aggregator owns it all

No

way to run their own loyalty, retention or upsell — they rent an audience

∞

building an in-house app needs a tech team most cafés will never have

Result: cafés are price-takers, dependent on platforms that compete with them.

WHY NOW

Four curves are crossing at once

Commission fatigue is peaking

NRAI #Logout, a CCI probe, and new low-commission entrants prove operators are revolting against the 30% model.

AI is finally cheap & good enough

Conversational ordering, food intelligence and personalization now run at café scale and cost.

UPI is ubiquitous

85% of digital payment volume — friction-free direct checkout is default behavior in India.

D2C has reached F&B

Brands want to own their channel, as every other category already did.

THE SOLUTION

Each café's own AI ordering app — the rails, not the middleman

- A white-label ordering app for each café — fully branded, on its own subdomain, live in days
- Flat SaaS subscription, no commission — the café keeps 100% of order value
- Built-in menu management, admin dashboard, analytics, customer accounts, loyalty & discounts
- An AI layer no aggregator gives the café: chat ordering, food intelligence, smart upsell, AI loyalty
- Cafés own the customer, the data and the margin

We're not another marketplace — we're the OS that lets a café be its own marketplace.

THE PRODUCT

Two products in one

Branded storefront

Logo, colours, menu, cart & checkout on the café's own subdomain — a mobile-first PWA, no app download.

AI ordering assistant

A 'what should I eat?' chat that recommends dishes, answers questions and builds the cart.

Food intelligence

Every item enriched with origin, ingredients, allergens and nutrition — unique to Pista.

Loyalty & rewards

Points, tiers and redeemable rewards (₹-off or free items), redeemed right at checkout.

Super-admin console

Pista provisions, themes and monitors every café tenant from one control plane.

Guest feedback

Post-order ratings & comments roll up into an owner feedback dashboard.

WHAT'S NEW

A built-in growth engine

WhatsApp marketing

Personalized WhatsApp campaigns to loyal customers — segmented by tier, spend and recency.

AI campaign copywriter

AI drafts each message and personalizes every send with the customer's name, tier and points.

Automated triggers

Order confirmations, ready alerts, reward nudges and win-back reminders fire automatically.

AI platform analytics

Revenue & MRR trends, a next-month forecast and at-risk cafés, with an AI insight summary.

Sale banners

Owners upload promo banners that appear instantly atop their live ordering app.

Loyalty segments

Target Gold members, lapsed regulars or customers close to a reward in one tap.

HOW IT WORKS

From signup to a live branded app — in days

Onboard

In the super-admin console: set brand, colours, menu, subdomain.

Auto-provision

A multi-tenant storefront goes live on its subdomain — days, not months.

Manage

Owner logs into their dashboard for menu, orders & loyalty.

Sell more

Customers order on web; AI assistant + upsells lift basket size from day one.

MARKET SIZE

Monetize the operators, not the orders

\$32B → \$140B+

India online food ordering & delivery
(2024→2030, ~28% CAGR)

**\$254M →
\$848M**

India restaurant-tech SaaS — Pista's TAM
(2024→2030, 22.8% CAGR)

₹18-54 Cr

5-yr SOM ARR — 2,000–6,000 outlets at our
price points

TAM • SAM • SOM

India organized foodservice is compounding at 13.2% CAGR; UPI handles 85% of digital payments. Figures are industry estimates; SOM is a bottoms-up build on Pista's pricing.

BUSINESS MODEL

Flat SaaS — zero per-order commission

Starter

₹4,999/mo

Single café, full storefront + core AI

Growth

₹12,999/mo

Multi-outlet, advanced analytics, full AI
loyalty & upsells

Enterprise

Custom

Chains, white-glove provisioning, self-host,
SSO/integrations

Land-and-expand: start single-outlet → expand to all outlets → upsell AI & enterprise. High gross margin; sticky once the storefront is the café's primary channel.

COMPETITION

The only AI-native, commission-free, fully-branded ordering OS

vs Aggregators (Zomato/Swiggy)

Take 16–30% and own the customer. Pista: flat SaaS, the café owns everything.

vs UrbanPiper / Posist / Petpooja

Strong POS/integration tooling, but aggregator-centric and light on a branded, AI-native consumer storefront.

vs Olo / Toast (US)

Validate the white-label SaaS thesis at scale — we bring it to India, AI-first, at a far lower price.

Our wedge

White-label + multi-tenant + AI-native + food intelligence + no commission + self-hostable — and already live in production.

Win a chain, prove ROI on outlet one, expand

- ICP: specialty cafés and small/mid coffee & restaurant chains (3–50 outlets) already feeling commission pain
- Beachhead: coffee-led chains — high repeat frequency makes loyalty + AI shine
- Channels: founder-led direct sales, café-owner communities, POS/roaster/payment partnerships, referral loops
- First 100 cafés: hand-picked design partners in 2–3 metros, white-glove onboarding
- Land-and-expand within chains drives logo growth without linear sales cost

STATUS

The hard part is already built

- Product is live, multi-tenant and in production — Next.js, self-hostable
- Shipped: branded storefronts, café + super-admin consoles, AI assistant, food intelligence, loyalty with redemption, table QR ordering, guest feedback, WhatsApp marketing, sale banners, and AI platform analytics
- Design-partner program in motion — onboarding first café/chain partners to validate ROI & pricing
- Pre / early-revenue — raising to convert a working product into a repeatable go-to-market

The hard part — a working, multi-tenant, AI-native platform — is done. We're now proving the sales motion.

SaaS compounding on logos & ARPU

Illustrative — for modeling discussion only

	Year 1	Year 2	Year 3
Paying outlets	100	600	2,500
Blended ARPU (₹/mo)	7,500	8,500	9,500
ARR (₹)	~0.9 Cr	~6.1 Cr	~28.5 Cr

Growth driven by land-and-expand within chains and a mix shift toward Growth/Enterprise. Revenue scales with logos & ARPU, not order-volume volatility.

TEAM

We shipped what most teams only pitch

Founder / CEO

Product & F&B domain lead

Founder / CTO

Built the live multi-tenant platform

Founding GTM

F&B sales & chain partnerships

Add founder names, photos & bios before sending — lead with “we shipped a live, multi-tenant AI platform.”

THE ASK

Raising ₹2-4 Cr (\$250K-\$500K) pre-seed/seed

- Use of funds: GTM & founder-led sales 40% · product/AI depth 30% · onboarding & success 20% · infra 10%
- 12-18 mo milestones: 100+ paying outlets, 5-10 chain logos, proven CAC/payback, ROI case studies
- Unlocks a seed/Series A: a repeatable sales motion + early net revenue retention from land-and-expand

We're not asking you to fund a build — we're asking you to fund distribution of a product that already works.
